IFR ALTERNATE AIRPORT MINIMUMS

Standard alternate minimums for non precision approaches are 800-2 (NDB, VOR, LOC, TACAN, LDA, VORTAC, VOR/DME, ASR or WAAS LNAV); for precision approaches 600-2 (ILS or PAR). Airports within this geographical area that require alternate minimums other than standard or alternate minimums with restrictions are listed below. NA - means alternate minimums are not authorized due to unmonitored facility or absence of weather reporting service. Civil pilots see FAR 91. IFR Alternate Airport Minimums: Ceiling and Visibility Minimums not applicable to USA/USN/USAF. Pilots must review the IFR Alternate Airport Minimums Notes for alternate airfield suitability.

INSTRUMENT APPROACH PROCEDURE CHARTS

IFR TAKE-OFF MINIMUMS AND (OBSTACLE) DEPARTURE PROCEDURES

Civil Airports and Selected Military Airports

ALL USERS: Airports that have Departure Procedures (DPs) designed specifically to assist pilots in avoiding obstacles during the climb to the minimum enroute altitude , and/or airports that have civil IFR take-off minimums other than standard, are listed below. Take-off Minimums and Departure Procedures apply to all runways unless otherwise specified. Altitudes, unless otherwise indicated, are minimum altitudes in MSL.

DPs specifically designed for obstacle avoidance are referred to as Obstacle Departure Procedures (ODPs) and are described below in text, or published separately as a graphic procedure. If the (Obstacle) DP is published as a graphic procedure, its name will be listed below, and it can be found in either this volume (civil), or a separate Departure Procedure volume (military), as appropriate. Users will recognize graphic obstacle DPs by the term "(OBSTACLE)" included in the procedure title; e.g., TETON TWO (OBSTACLE). If not assigned a SID or radar vector by ATC, an ODP may be flown without ATC clearance to ensure obstacle clearance.

Graphic DPs designed by ATC to standardize traffic flows, ensure aircraft separation and enhance capacity are referred to as "Standard Instrument Departures (SIDs)". SIDs also provide obstacle clearance and are published under the appropriate airport section. ATC clearance must be received prior to flying a SID.

CIVIL USERS NOTE: Title 14 Code of Federal Regulations Part 91 prescribes standard take-off rules and establishes take-off minimums for certain operators as follows: (1) Aircraft having two engines or less - one statute mile. (2) Aircraft having more than two engines - one-half statute mile. These standard minima apply in the absence of any different minima listed below.

MILITARY USERS NOTE: Civil (nonstandard) take-off minima are published below. For military take-off minima, refer to appropriate service directives.

NAME	TAKE-OFF MINIMUMS

AKRON, NY

AKRON (9G3)

LAND AND HOLD SHORT OPERATIONS (LAHSO)

LAHSO is an acronym for "Land and Hold Short Operations." These operations include landing and holding short of an intersection runway, an intersecting taxiway, or other predetermined points on the runway other than a runway or taxiway. Measured distance represents the available landing distance on the landing runway, in feet.

Specific questions regarding these distances should be referred to the air traffic manager of the facility concerned. The Aeronautical Information Manual contains specific details on hold-short operations and markings.

HOT SPOTS

An "airport surface hot spot" is a location on an aerodrome movement area with a history or potential risk of collision or runway incursion, and where heightened attention by pilots/drivers is necessary.

A "hot spot" is a runway safety related problem area on an airport that presents increased risk during surface operations. Typically it is a complex or confusing taxiway/taxiway or taxiway/runway intersection. The area of increased risk has either a history of or potential for runway incursions or surface incidents, due to a variety of causes, such as but not limited to: airport layout, traffic flow, airport marking, signage and lighting, situational awareness, and training. Hot spots are depicted on airport diagrams as open circles or polygons designated as "HS 1", "HS 2", etc. and tabulated in the list below with a brief description of each hot spot. Hot spots will remain charted on airport diagrams until such time the increased risk has been reduced or eliminated.

CITY/AIRPORT	HOT SPOT	DESCRIPTION*
CALDWELL, NJ		
ESSEX COUNTY (CDW)	HS 1	Twy N and Twy P close proximity to Rwy 28.

LAND AND HOLD SHORT OPERATIONS (LAHSO)

LAHSO is an acronym for "Land and Hold Short Operations." These operations include landing and holding short of an intersection runway, an intersecting taxiway, or other predetermined points on the runway other than a runway or taxiway. Measured distance represents the available landing distance on the landing runway, in feet.

Specific questions regarding these distances should be referred to the air traffic manager of the facility concerned. The Aeronautical Information Manual contains specific details on hold-short operations and markings.

DEPARTURE ROUTE DESCRIPTION

TAKE-OFF RUNWAY 22L/R:

TURNPIKE CLIMB: Climb heading 215°, or as assigned by ATC, Thence . . . .
PARKWAY CLIMB: Climbing right turn heading 239°, or as assigned by ATC, Thence . . . .
BUD CLIMB: Climbing right turn heading 263°, or as assigned by ATC, Thence . . . .

. . . . via radar vectors to assigned route/fix. Maintain 5000 or assigned lower altitude. Expect clearance to filed altitude/flight level within 10 minutes after departure.

LOST COMMUNICATIONS: For aircraft via COATE, NEION, HAAYS, GAYEL, BREZY, if radio contact lost/not established with ATC, climb to 3000 feet after SBJ R-047.

PROCEDURAL NOTES

NOTE: Westbound expect radar vectors between 5 and 8 NM.
NOTE: BAYYS departure expect vectors via BDR/BDR R-054.
NOTE: BIGGY departures expect vectors via SBJ/SBJ R-237.
NOTE: BREZY departures expect vectors via IGN R-217 to BREZY.
NOTE: COATE departures expect vectors via SAX/SAX R-311.
NOTE: ELIOT departures expect vectors via SAX R-252. Between 2300 and 0700 local.
NOTE: ELIOT departures expect vectors via SBJ or ETX.
NOTE: GAYEL departures expect vectors via DPK R-320.
NOTE: GREKI departures expect vectors via CMK/CMK R-057.
NOTE: HAAYS departures expect vectors via HUO.
NOTE: LANNA departures expect radar vectors via SBJ/SBJ R-274.
NOTE: MERIT departures expect vectors via LGA R-055.
NOTE: NEION departures expect vectors via LGA R-322.
NOTE: PARKE departures expect radar vectors via SBJ/SBJ R-302.
NOTE: WAVEY departures expect vectors via JFK/JFK R-156.
NOTE: WHITE/DIXIE departures expect vectors to COL R-350. Thence WHITE via COL R-204 or DIXIE via COL R-192.

TAKE-OFF OBSTACLES
Rwy 22L: Pole 8′ from DER, 261′ left of centerline, 7′ AGL/16′ MSL.
Rwy 22R: Light and multiple trees beginning 1829′ from DER, 307′ right of centerline, up to 55′ AGL/69′ MSL.
Building 1.4 NM from DER, 1872′ left of centerline, 200′ AGL/227′MSL.

DEPARTURE ROUTE DESCRIPTION

TAKE-OFF RUNWAY 4L/R: Climb via heading 060°, upon crossing 4 DME Rwy 4R ILS (use Rwy 4L ILS only if 4R ILS is not available). Turn left heading 290° maintain 2500 feet. Thence . . . .

TAKE-OFF RUNWAY 11: Climbing left turn via heading 060° (do not proceed east of COL R-023). Upon crossing 4 DME Rwy 4R ILS (use Rwy 4L ILS only if 4R ILS is not available). Turn left heading 290°, maintain 2500 feet. Thence . . . .

TAKE-OFF RUNWAY 22L/R: Climbing left turn via heading 190°, upon crossing 2.3 DME Rwy 22L ILS (use Rwy 22R ILS only if 22L ILS is not available). Turn right heading 220°, maintain 5000 feet. Thence . . . .

TAKE-OFF RWY 29: Climb via runway heading to MARYANN (MB) Fan Marker, then climbing left turn heading 265°. Maintain 5000 feet. Thence . . . .

. . . . via vectors to COL R-350.COL.COL R-192.DIXIE.V276.PREPI.GLINN.A300.JFK. Thence . . . .

. . . . as per notes or via vectors or assigned route/fix.

Expect clearance to filed altitude/flight level ten minutes after departure.

PROCEDURAL NOTES

NOTE: MARYANN fan marker is 1875 feet outbound from departure end and 46.5' north of runway centerline.

NOTE: Takeoff Rwy 11, obstruction 1742 feet high, 6.5 miles east of departure end of runway.

NOTE: RNAV aircraft only.

NOTE: Rwy 4L/R, 11, 22L/R DME required.

NOTE: Departure procedure to be used when assigned by ATC only for severe weather avoidance.

NOTE: This procedure requires overwater flight not to exceed 50 miles.

NOTE: Approximate mileage from Newark Airport via this routing to JFK is 150 NM. All aircraft should expect to fly the departure route prior to receiving vectors to assigned route/fix.

DEPARTURE ROUTE DESCRIPTION

TAKEOFF RUNWAY 4L: Climb via heading 060°. Upon crossing 4 DME Rwy 4R ILS (use Rwy 4L ILS only if 4R ILS is not available), turn left heading 290°. Cross TEB R-214 westbound at or above 2500, climb and maintain 3000 feet. Thence . . . .

TAKEOFF RUNWAY 4R: Climb heading 039° to 500, then climb via heading 060°. Upon crossing 4 DME Rwy 4R ILS (use Rwy 4L ILS only if 4R ILS is not available), turn left heading 290°. Cross TEB R-214 westbound at or above 2500, climb and maintain 3000. Thence . . . .

TAKEOFF RUNWAY 11: Climb via heading 060° (do not proceed east of COL R-023). Upon crossing 4 DME Rwy 4R ILS (use Rwy 4L ILS only if 4R ILS is not available), turn left heading 290°. Cross TEB R-214 westbound at or above 2500, climb and maintain 3000 feet. Thence . . . .

TAKEOFF RUNWAY 22L: Climb heading 219° to 500, then climbing left turn heading 190°. Upon crossing 2.3 DME Rwy 22L ILS (use Rwy 22R ILS only if 22L ILS is not available), turn right heading 220°, maintain 5000 feet. Thence . . . .

TAKEOFF RWY 22R: Climbing left turn heading 190°. Upon crossing 2.3 DME Rwy 22L ILS (use Rwy 22R ILS only if 22L ILS is not available), turn right heading 220°, maintain 5000 feet. Thence . . . .

TAKEOFF RWY 29: Climb via heading 288° to MARYANN Fan Marker, then climbing left turn heading 265°, maintain 5000 feet. Thence . . . .

. . . . as per notes or via assigned vector/route/fix. Expect clearance to filed altitude/flight level ten minutes after departure.

LOST COMMUNICATIONS: For aircraft via COATE, NEION, HAAYS, GAYEL, BREZY, if radio contact lost/not established with ATC, climb to 3000 feet after SBJ R-047.

NOTE: RADAR Required.
NOTE: Rwy 4L/R, 11, 22L/R DME Required.
NOTE: Rwy 4L/R, 11 simultaneous reception of EWR ILS/DME and TEB VOR/DME Required.
NOTE: MARYANN fan marker is 1875 feet outbound from departure end and 46.5 feet north of Rwy 29 centerline.
NOTE: Rwy 22L/R westbound departures expect vectors between 5 and 8 NM.

ARRIVAL ROUTE DESCRIPTION

ALBANY TRANSITION (ALB.SHAFF6): From over ALB VORTAC via ALB R-211 to WEETS INT, then via SAX R-029 to FLOSI INT. Thence. . . .

BARNES TRANSITION (BAF.SHAFF6): From over BAF VORTAC via BAF R-279 to TALCO INT, then via ALB R-211 to WEETS INT, then via SAX R-029 to FLOSI INT. Thence. . . .

BRADLEY TRANSITION (BDL.SHAFF6): From over BDL VORTAC via BDL R-266 and IGN R-084 to IGN VOR/DME, then via IGN R-265 to FLOSI INT. Thence. . . .

GENESEO TRANSITION (GEE.SHAFF6): From over GEE VOR/DME via GEE R-111 to EXTOL INT, then via HNK R-313 to HNK VOR/DME, then via HNK R-128 to HELON INT, then via SAX R-029 to FLOSI INT. Thence. . . .

HANCOCK TRANSITION (HNK.SHAFF6): From over HNK VOR/DME via HNK HNK R-128 to HELON INT, then via SAX R-029 to FLOSI INT. Thence. . . .

. . . . From over FLOSI INT via SAX R-029 to CRANK INT, then to SHAFF INT, then to SAX VORTAC (MEA 4000, MOCA 3200). Expect radar vectors to final approach course.

USE CAUTION: Glider activity between HELON and CRANK intersections.

NOTE: This STAR applicable to turbojet aircraft only.

NOTE: Expect to cross HNK VOR/DME at or below FL180. Expect to cross 25 NM north of SAX VORTAC at or below 8000 feet, decending to 7000 feet.

NOTE: Aircraft arriving from points east file BDL Transition, BAF transition to be assigned by ATC. Expect to cross 10 NM east of BDL VORTAC at 16,000. Expect to cross BAF VORTAC at 16,000 via BAF transition.

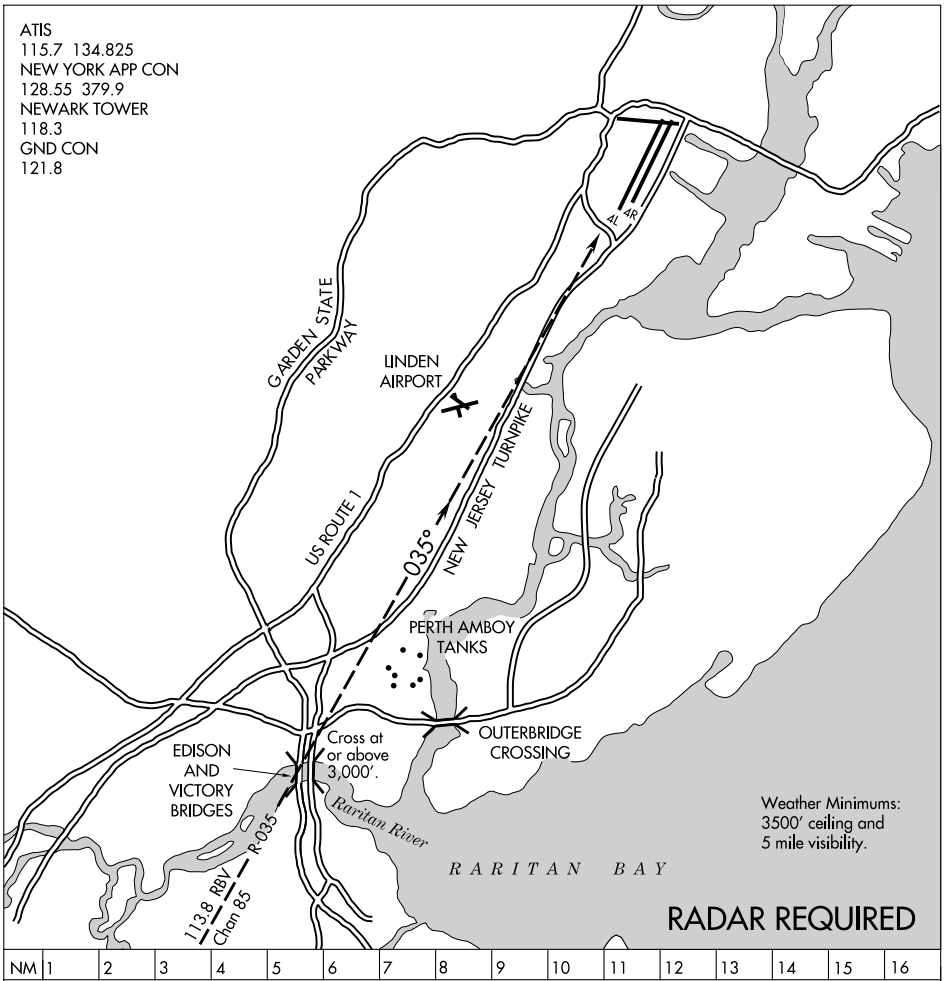
TURNPIKE VISUAL RUNWAY 4L/4R



NE-2, 21 OCT 2010 to 18 NOV 2010

TURNPIKE VISUAL RUNWAY 4L/4R

Expect radar vectors to intercept the RBV R-035. While established on RBV R-035, cross intersection of Raritan River and Edison and Victory bridges at 3,000 feet or above, remain on RBV R-035 west of Perth Amboy tanks until crossing New Jersey Turnpike. Continue on west side of New Jersey Turnpike past Linden Airport (recommended altitude 1,500 feet or above).

LAND AND HOLD SHORT OPERATIONS (LAHSO)

LAHSO is an acronym for "Land and Hold Short Operations." These operations include landing and holding short of an intersection runway, an intersecting taxiway, or other predetermined points on the runway other than a runway or taxiway. Measured distance represents the available landing distance on the landing runway, in feet.

Specific questions regarding these distances should be referred to the air traffic manager of the facility concerned. The Aeronautical Information Manual contains specific details on hold-short operations and markings.

INSTRUMENT APPROACH PROCEDURE CHARTS

IFR ALTERNATE AIRPORT MINIMUMS

Standard alternate minimums for non precision approaches are 800-2 (NDB, VOR, LOC, TACAN, LDA, VORTAC, VOR/DME, ASR or WAAS LNAV); for precision approaches 600-2 (ILS or PAR). Airports within this geographical area that require alternate minimums other than standard or alternate minimums with restrictions are listed below. NA - means alternate minimums are not authorized due to unmonitored facility or absence of weather reporting service. Civil pilots see FAR 91. IFR Alternate Airport Minimums: Ceiling and Visibility Minimums not applicable to USA/USN/USAF. Pilots must review the IFR Alternate Airport Minimums Notes for alternate airfield suitability.

INSTRUMENT APPROACH PROCEDURE CHARTS

IFR TAKE-OFF MINIMUMS AND (OBSTACLE) DEPARTURE PROCEDURES

Civil Airports and Selected Military Airports

ALL USERS: Airports that have Departure Procedures (DPs) designed specifically to assist pilots in avoiding obstacles during the climb to the minimum enroute altitude , and/or airports that have civil IFR take-off minimums other than standard, are listed below. Take-off Minimums and Departure Procedures apply to all runways unless otherwise specified. Altitudes, unless otherwise indicated, are minimum altitudes in MSL.

DPs specifically designed for obstacle avoidance are referred to as Obstacle Departure Procedures (ODPs) and are described below in text, or published separately as a graphic procedure. If the (Obstacle) DP is published as a graphic procedure, its name will be listed below, and it can be found in either this volume (civil), or a separate Departure Procedure volume (military), as appropriate. Users will recognize graphic obstacle DPs by the term "(OBSTACLE)" included in the procedure title; e.g., TETON TWO (OBSTACLE). If not assigned a SID or radar vector by ATC, an ODP may be flown without ATC clearance to ensure obstacle clearance.

Graphic DPs designed by ATC to standardize traffic flows, ensure aircraft separation and enhance capacity are referred to as "Standard Instrument Departures (SIDs)". SIDs also provide obstacle clearance and are published under the appropriate airport section. ATC clearance must be received prior to flying a SID.

CIVIL USERS NOTE: Title 14 Code of Federal Regulations Part 91 prescribes standard take-off rules and establishes take-off minimums for certain operators as follows: (1) Aircraft having two engines or less - one statute mile. (2) Aircraft having more than two engines - one-half statute mile. These standard minima apply in the absence of any different minima listed below.

MILITARY USERS NOTE: Civil (nonstandard) take-off minima are published below. For military take-off minima, refer to appropriate service directives.

LAND AND HOLD SHORT OPERATIONS (LAHSO)

LAHSO is an acronym for "Land and Hold Short Operations." These operations include landing and holding short of an intersection runway, an intersecting taxiway, or other predetermined points on the runway other than a runway or taxiway. Measured distance represents the available landing distance on the landing runway, in feet.

Specific questions regarding these distances should be referred to the air traffic manager of the facility concerned. The Aeronautical Information Manual contains specific details on hold-short operations and markings.

LAND AND HOLD SHORT OPERATIONS (LAHSO)

LAHSO is an acronym for "Land and Hold Short Operations." These operations include landing and holding short of an intersection runway, an intersecting taxiway, or other predetermined points on the runway other than a runway or taxiway. Measured distance represents the available landing distance on the landing runway, in feet.

Specific questions regarding these distances should be referred to the air traffic manager of the facility concerned. The Aeronautical Information Manual contains specific details on hold-short operations and markings.

LAND AND HOLD SHORT OPERATIONS (LAHSO)

LAHSO is an acronym for "Land and Hold Short Operations." These operations include landing and holding short of an intersection runway, an intersecting taxiway, or other predetermined points on the runway other than a runway or taxiway. Measured distance represents the available landing distance on the landing runway, in feet.

Specific questions regarding these distances should be referred to the air traffic manager of the facility concerned. The Aeronautical Information Manual contains specific details on hold-short operations and markings.

Inoperative table does not apply to LNAV/VNAV all Cats. For inoperative MALSR, increase LPV all Cats visibility to 1¼ mile and LNAV Cats A/B visibility to 1 mile. Baro-VNAV NA when using Albany altimeter setting. For uncompensated Baro-VNAV systems, LNAV/VNAV NA below -15°C (5°F) or above 48°C (118°F). DME/DME RNP-0.3 NA. Visibility reduction by helicopters NA. When local altimeter setting not received use Albany altimeter setting and increase all DA 90 feet and all MDA 100 feet; increase LPV all Cats, LNAV Cat C/D and Circling Cats B/C/D visibility ¼ mile. VDP NA with Albany altimeter setting. For inoperative MALSR when using Albany altimeter setting, increase LPV all Cats visibility to 1½ mile and LNAV Cat A visibility to 1 mile.

MALSR

MISSED APPROACH: Climb to 4000 direct IRIGE and right turn on track 102° to WEPAB and on track 192° to TUCDE and on track 244° to EKAKE and hold.

LAND AND HOLD SHORT OPERATIONS (LAHSO)

LAHSO is an acronym for "Land and Hold Short Operations." These operations include landing and holding short of an intersection runway, an intersecting taxiway, or other predetermined points on the runway other than a runway or taxiway. Measured distance represents the available landing distance on the landing runway, in feet.

Specific questions regarding these distances should be referred to the air traffic manager of the facility concerned. The Aeronautical Information Manual contains specific details on hold-short operations and markings.

DEPARTURE ROUTE DESCRIPTION

TAKE-OFF RUNWAYS 4L/R: Turn right climb on heading 100°, maintain 5,000 feet.
TAKE-OFF RUNWAYS 13L/R: Climb on assigned departure heading, maintain 5,000 feet.
TAKE-OFF RUNWAYS 22L/R: Climb runway heading, maintain 5,000 feet.
* GATEWAY CLIMB: Turn right intercept the JFK R-232 until 5 DME, then turn left heading 220°, maintain 5,000 feet.
TAKE-OFF RUNWAYS 31L/R:
BREEZY POINT CLIMB: Turn left proceed direct CRI VOR/DME. Make turn east of CRI R-039 (remain within JFK 4.5 DME), then via CRI R-223. Cross CRI 3 NM DME or JFK R-253 at or above 2,500 feet, maintain 5,000 feet.
BRIDGE CLIMB: Turn left proceed direct OGY NDB, then fly heading 220° after OGY NDB. Make turn east of CRI R-039 (remain within JFK 4.5 DME). Cross JFK R-253 at or above 2,500 feet, maintain 5,000 feet.
CANARSIE CLIMB: Turn left proceed direct CRI VOR/DME. Make turn east of CRI R-039 (remain within JFK 4.5 DME), then via CRI R-176. Cross CRI 2 NM DME or JFK R-253 at or above 2,500 feet, maintain 5,000 feet.
NANTUCKET TRANSITION (BETTE3.ACK): From over BETTE INT to ACK VOR/DME.

BETTE: Via radar vectors to BETTE direct ACK VOR/DME. Expect clearance to filed altitude/flight level ten minutes after departure.

* NOTE: To be assigned during the period 2200-0700 local.
NOTE: RNAV equipped aircraft only.
NOTE: North American Route (NAR) aircraft only.

NOTE: Rwy 4L, 64' AGL taxiing aircraft 691' from departure end of rwy, 390' left or right of rwy centerlines. Cross DER at or above 35' AGL/47' MSL.

NE-2, 21 OCT 2010 to 18 NOV 2010

DEPARTURE ROUTE DESCRIPTION

TAKE-OFF RUNWAYS 4L/R: Climbing right turn to 5,000 feet via heading 100°, Thence....
TAKE-OFF RUNWAYS 13L/R: Climb via assigned heading, maintain 5,000 feet, Thence....
TAKE-OFF RUNWAYS 22L/R: Climb heading 225°, maintain 5,000 feet, Thence....
GATEWAY CLIMB*: Intercept the JFK VOR/DME R-232 southwest bound until 5 DME, then turn left heading 220°, maintain 5,000 feet, Thence....
TAKE-OFF RUNWAYS 31L/R:
BREEZY POINT CLIMB: Climbing left turn direct CRI VOR/DME, make turn east of CRI R-039, then via CRI R-223 to RNGRR/CRI 27 DME. Cross CRI 3 DME or JFK R-253 at or above 2,500 feet, maintain 5,000 feet, Thence....
BRIDGE CLIMB**: Climbing left turn direct OGY NDB, then via heading 220°, make turn east of CRI R-039. Cross JFK R-253 at or above 2,500 feet, maintain 5,000 feet, Thence....
CANARSIE CLIMB: Climbing left turn direct CRI VOR/DME, make turn east of CRI R-039, then via CRI R-176. Cross CRI 2 DME or JFK R-253 at or above 2,500 feet, maintain 5,000 feet, Thence....
IDLEWILD CLIMB***: Climbing right turn to 2000 feet via heading 090°, remain within JFK 2.5 DME ****, Thence....
....Via vectors to assigned route/fix. Expect clearance to filed altitude/flight level ten minutes after departure.

* To be assigned during the period 2200-0700 local.
** ADF Required.
*** To be assigned by ATC to NON-TURBOJET AIRCRAFT.
**** If unable to remain within JFK 2.5 DME, advise ATC.

TAKE-OFF OBSTACLES:

Rwy 4L: Taxiing Aircraft 691' from DER, 390' left or right of rwy centerline, 64' AGL/77' MSL. Cross DER at or above 35' AGL/47' MSL. DEPARTURE ROUTE DESCRIPTION

TAKE-OFF RUNWAYS 4L/R: Turn right climb on heading 100°, maintain 5,000 feet.
TAKE-OFF RUNWAYS 13L/R: Climb on assigned departure heading, maintain 5,000 feet.
TAKE-OFF RUNWAYS 22L/R: Climb runway heading, maintain 5,000 feet.
* GATEWAY CLIMB: Turn right intercept the JFK R-232 until 5 DME, then turn left heading 220°, maintain 5,000 feet.
TAKE-OFF RUNWAYS 31L/R:
BREEZY POINT CLIMB: Turn left proceed direct CRI VOR/DME. Make turn east of CRI R-039 (remain within JFK 4.5 DME), then via CRI R-223. Cross CRI 3 NM DME or JFK R-253 at or above 2,500 feet, maintain 5,000 feet.
BRIDGE CLIMB: Turn left proceed direct OGY NDB, then fly heading 220° after OGY NDB. Make turn east of CRI R-039 (remain within JFK 4.5 DME). Cross JFK R-253 at or above 2,500 feet, maintain 5,000 feet.
CANARSIE CLIMB: Turn left proceed direct CRI VOR/DME. Make turn east of CRI R-039 (remain within JFK 4.5 DME), then via CRI R-176. Cross CRI 2 NM DME or JFK R-253 at or above 2,500 feet, maintain 5,000 feet.

PUTNAM TRANSITION (MERIT3.PUT): From over MERIT INT to HFD VOR/DME, then to PUT VOR/DME.

MERIT: Via radar vectors to MERIT direct HFD direct PUT. Expect clearance to filed altitude/flight level ten minutes after departure.
MERIT THREE: After PUT expect the following routes; aircraft proceeding:
1. TOPPS/EBONY - Expect direct.
2. ALLEX - Expect direct WITCH direct.
3. TUSKY and South - Expect direct BOS direct.

* NOTE: To be assigned during the period 2200-0700 local.
NOTE: RNAV equipped aircraft only.
NOTE: North American Route (NAR) aircraft only.

NOTE: Rwy 4L, 64' AGL taxiing aircraft 691' from departure end of rwy, 390' left or right of rwy centerline. Cross DER at or above 35' AGL/47' MSL.
Rwy 4R, cross DER at or above 21' AGL/33' MSL.
Rwy 13L, cross DER at or above 3' AGL/15' MSL.
Rwys 13R, 31L, 31R cross DER at or above 35' AGL/47' MSL.

NE-2, 21 OCT 2010 to 18 NOV 2010

DEPARTURE ROUTE DESCRIPTION

TAKE-OFF RUNWAYS 4L/R: Turn right climb on heading 100°, maintain 5,000 feet. Thence....
TAKE-OFF RUNWAYS 13L/R: Climb on assigned departure heading, maintain 5,000 feet. Thence....
TAKE-OFF RUNWAYS 22L/R: Climb on runway heading, maintain 5,000 feet. Thence....
GATEWAY CLIMB: *Turn right intercept the JFK R-232 until 5 DME, then turn left heading 220°, maintain 5,000 feet. Thence....
TAKE-OFF RUNWAYS 31L/R:
BREEZY POINT CLIMB: Turn left proceed direct CRI VOR/DME. Make turn east of CRI R-039 (remain within JFK 4.5 DME), then via CRI R-223. Cross CRI 3 DME or JFK R-253 at or above 2,500 feet, maintain 5,000 feet. Thence....
BRIDGE CLIMB: Turn left proceed direct OGY NDB, then fly heading 220° after OGY NDB. Make turn east of CRI R-039 (remain within JFK 4.5 DME), cross JFK R-253 at or above 2,500 feet, maintain 5,000 feet. Thence....
CANARSIE CLIMB: Turn left proceed direct CRI VOR/DME. Make turn east of CRI R-039 (remain within JFK 4.5 DME), then via CRI R-176. Cross CRI 2 DME or JFK R-253 at or above 2,500 feet, maintain 5,000 feet. Thence....

....Via vectors to the JFK R-139 to SEIFF DME fix, then turn right proceed direct to the JFK VOR/DME. Expect vectors to assigned route/fix. Expect clearance to filed altitude/flight level ten minutes after departure.

*To be assigned during the period 2200-0700 local.

NOTE: RNAV equipped aircraft only.
NOTE: This procedure requires overwater flight not to exceed 50 miles.
NOTE: Departure procedure to be used when assigned by ATC only.
NOTE: COATE departures except vectors to SAX VORTAC or SAX R-311.

NOTE: Rwy 4L, 64' AGL taxiing aircraft 691' from departure end of rwy, 390' left or right of rwy centerline. Cross DER at or above 35' AGL/47' MSL.
Rwy 4R, cross DER at or above 21' AGL/33' MSL.
Rwy 13L, cross DER at or above 3' AGL/15' MSL.
Rwys 13R, 31L, 31R cross DER at or above 35' AGL/47' MSL.

HOT SPOTS

An "airport surface hot spot" is a location on an aerodrome movement area with a history or potential risk of collision or runway incursion, and where heightened attention by pilots/drivers is necessary.

A "hot spot" is a runway safety related problem area on an airport that presents increased risk during surface operations. Typically it is a complex or confusing taxiway/taxiway or taxiway/runway intersection. The area of increased risk has either a history of or potential for runway incursions or surface incidents, due to a variety of causes, such as but not limited to: airport layout, traffic flow, airport marking, signage and lighting, situational awareness, and training. Hot spots are depicted on airport diagrams as open circles or polygons designated as "HS 1", "HS 2", etc. and tabulated in the list below with a brief description of each hot spot. Hot spots will remain charted on airport diagrams until such time the increased risk has been reduced or eliminated.

CITY/AIRPORT	HOT SPOT	DESCRIPTION*
CALDWELL, NJ		
ESSEX COUNTY (CDW)	HS 1	Twy N and Twy P close proximity to Rwy 28.
NEW YORK, NY		
LA GUARDIA (LGA)	HS 1	Int of rwys and Twy G, Twy P, Twy R, Twy S.

LAND AND HOLD SHORT OPERATIONS (LAHSO)

LAHSO is an acronym for "Land and Hold Short Operations." These operations include landing and holding short of an intersection runway, an intersecting taxiway, or other predetermined points on the runway other than a runway or taxiway. Measured distance represents the available landing distance on the landing runway, in feet.

Specific questions regarding these distances should be referred to the air traffic manager of the facility concerned. The Aeronautical Information Manual contains specific details on hold-short operations and markings.

TAKEOFF MINIMUMS:
Rwys 4, 22, 31: NA-ATC.
Rwy 13: Standard with minimum climb of 280′ per NM to 540. ATC climb of 441′ per NM to 5000.

NOTE: For turbojets only.
NOTE: DME/DME/IRU or GPS required.
NOTE: Radar required for non-GPS equipped aircraft.
NOTE: RNAV 1.
NOTE: If unable to accept climb rates, advise ATC on initial contact.
NOTE: WHITE, WAVEY, SHIPP, DIXIE departures can expect radar vectors after passing STBNZ.
NOTE: Do not exceed 250 KIAS until reaching 11000 MSL.

DEPARTURE ROUTE DESCRIPTION

TAKEOFF RUNWAY 13: Climb heading 134° to intercept course 053° to cross JUTES at or above 2500, then on track 042° to cross TNNIS at or above 5000, then left turn on track 312° to cross STBNZ 7000 block 12000, thence ....

....Maintain 7000 or as assigned by ATC. Expect clearance to filed altitude/flight level within 10 minutes after departure.

LAND AND HOLD SHORT OPERATIONS (LAHSO)

LAHSO is an acronym for "Land and Hold Short Operations." These operations include landing and holding short of an intersection runway, an intersecting taxiway, or other predetermined points on the runway other than a runway or taxiway. Measured distance represents the available landing distance on the landing runway, in feet.

Specific questions regarding these distances should be referred to the air traffic manager of the facility concerned. The Aeronautical Information Manual contains specific details on hold-short operations and markings.

HOT SPOTS

An "airport surface hot spot" is a location on an aerodrome movement area with a history or potential risk of collision or runway incursion, and where heightened attention by pilots/drivers is necessary.

A "hot spot" is a runway safety related problem area on an airport that presents increased risk during surface operations. Typically it is a complex or confusing taxiway/taxiway or taxiway/runway intersection. The area of increased risk has either a history of or potential for runway incursions or surface incidents, due to a variety of causes, such as but not limited to: airport layout, traffic flow, airport marking, signage and lighting, situational awareness, and training. Hot spots are depicted on airport diagrams as open circles or polygons designated as "HS 1", "HS 2", etc. and tabulated in the list below with a brief description of each hot spot. Hot spots will remain charted on airport diagrams until such time the increased risk has been reduced or eliminated.

CITY/AIRPORT	HOT SPOT	DESCRIPTION*
CALDWELL, NJ		
ESSEX COUNTY (CDW)	HS 1	Twy N and Twy P close proximity to Rwy 28.

LAND AND HOLD SHORT OPERATIONS (LAHSO)

LAHSO is an acronym for "Land and Hold Short Operations." These operations include landing and holding short of an intersection runway, an intersecting taxiway, or other predetermined points on the runway other than a runway or taxiway. Measured distance represents the available landing distance on the landing runway, in feet.

Specific questions regarding these distances should be referred to the air traffic manager of the facility concerned. The Aeronautical Information Manual contains specific details on hold-short operations and markings.

LAND AND HOLD SHORT OPERATIONS (LAHSO)

LAHSO is an acronym for "Land and Hold Short Operations." These operations include landing and holding short of an intersection runway, an intersecting taxiway, or other predetermined points on the runway other than a runway or taxiway. Measured distance represents the available landing distance on the landing runway, in feet.

Specific questions regarding these distances should be referred to the air traffic manager of the facility concerned. The Aeronautical Information Manual contains specific details on hold-short operations and markings.

IFR ALTERNATE AIRPORT MINIMUMS

Standard alternate minimums for non precision approaches are 800-2 (NDB, VOR, LOC, TACAN, LDA, VORTAC, VOR/DME, ASR or WAAS LNAV); for precision approaches 600-2 (ILS or PAR). Airports within this geographical area that require alternate minimums other than standard or alternate minimums with restrictions are listed below. NA - means alternate minimums are not authorized due to unmonitored facility or absence of weather reporting service. Civil pilots see FAR 91. IFR Alternate Airport Minimums: Ceiling and Visibility Minimums not applicable to USA/USN/USAF. Pilots must review the IFR Alternate Airport Minimums Notes for alternate airfield suitability.

INSTRUMENT APPROACH PROCEDURE CHARTS

IFR TAKE-OFF MINIMUMS AND (OBSTACLE) DEPARTURE PROCEDURES

Civil Airports and Selected Military Airports

ALL USERS: Airports that have Departure Procedures (DPs) designed specifically to assist pilots in avoiding obstacles during the climb to the minimum enroute altitude , and/or airports that have civil IFR take-off minimums other than standard, are listed below. Take-off Minimums and Departure Procedures apply to all runways unless otherwise specified. Altitudes, unless otherwise indicated, are minimum altitudes in MSL.

DPs specifically designed for obstacle avoidance are referred to as Obstacle Departure Procedures (ODPs) and are described below in text, or published separately as a graphic procedure. If the (Obstacle) DP is published as a graphic procedure, its name will be listed below, and it can be found in either this volume (civil), or a separate Departure Procedure volume (military), as appropriate. Users will recognize graphic obstacle DPs by the term "(OBSTACLE)" included in the procedure title; e.g., TETON TWO (OBSTACLE). If not assigned a SID or radar vector by ATC, an ODP may be flown without ATC clearance to ensure obstacle clearance.

Graphic DPs designed by ATC to standardize traffic flows, ensure aircraft separation and enhance capacity are referred to as "Standard Instrument Departures (SIDs)". SIDs also provide obstacle clearance and are published under the appropriate airport section. ATC clearance must be received prior to flying a SID.

CIVIL USERS NOTE: Title 14 Code of Federal Regulations Part 91 prescribes standard take-off rules and establishes take-off minimums for certain operators as follows: (1) Aircraft having two engines or less - one statute mile. (2) Aircraft having more than two engines - one-half statute mile. These standard minima apply in the absence of any different minima listed below.

MILITARY USERS NOTE: Civil (nonstandard) take-off minima are published below. For military take-off minima, refer to appropriate service directives.

NAME	TAKE-OFF MINIMUMS

ALLENTOWN, PA

ALLENTOWN QUEEN CITY MUNI

TAKE-OFF MINIMUMS: **Rwy 7**, 800-2 or std. with a min. climb of 280' per NM to 1600. **Rwy 15**, not authorized.

DEPARTURE PROCEDURE: **Rwy 7**, climb runway heading to 2200 before proceeding on course. **Rwy 25,** climbing right turn to assigned altitude direct ETX VOR/DME. **Rwy 33,** climbing left turn to assigned altitude direct ETX VOR/DME.

LEHIGH VALLEY INTL

TAKE-OFF MINIMUMS: **Rwy 13,** 800-1 or std. with a min. climb of 270' per NM to 1600'.

DEPARTURE PROCEDURE: **Rwy 13**, climb runway heading to 1600 before proceeding on course. **Rwy 24,** climb runway heading to 1600 before proceeding southbound on course.

NAME	TAKE-OFF MINIMUMS

ALTOONA, PA

ALTOONA-BLAIR COUNTY

TAKE-OFF MINIMUMS: **Rwy 3**, 300-1 or std. with a min. climb of 260' per NM to 1700. **Rwy 12**, NA-Obstacles. **Rwy 21,** std. with a min. climb of 350' per NM to 3200 or 1400-3 for climb in visual conditions. **Rwy 30,** std. with a min. climb of 225' per NM to 3800 or 1400-3 for climb in visual conditions. NOTE: Climb in visual conditions not authorized at night.

DEPARTURE PROCEDURE: **Rwy 3**, climb direct AOO VOR, then via AOO R-026 to 2800' before proceeding on course. **Rwy 21**, climb via heading 203° and AOO R-206 to 3200 before proceeding on course. For climb in visual conditions, cross Altoona-Blair County Airport at or above 2900 before proceeding on course. **Rwy 30**, climb via heading 295° to 3800 before proceeding on course. For climb in visual conditions, cross Altoona-Blair County Airport at or above 2900 before proceeding on course.

NOTE: **Rwy 3,** numerous trees 1537' from departure end of runway, 904' left of centerline, 100' AGL/1554' MSL. Numerous trees 5759' from departure end of runway, 1600' right of centerline, 100' AGL/1642' MSL. **Rwy 21,** multiple trees 2541' from departure end of runway, 369' left of centerline, 100' AGL/1583' MSL. Multiple trees 1080' from departure end of runway, 511' right of centerline, 100' AGL/1550' MSL.

LAND AND HOLD SHORT OPERATIONS (LAHSO)

LAHSO is an acronym for "Land and Hold Short Operations." These operations include landing and holding short of an intersection runway, an intersecting taxiway, or other predetermined points on the runway other than a runway or taxiway. Measured distance represents the available landing distance on the landing runway, in feet.

Specific questions regarding these distances should be referred to the air traffic manager of the facility concerned. The Aeronautical Information Manual contains specific details on hold-short operations and markings.

HOT SPOTS

An "airport surface hot spot" is a location on an aerodrome movement area with a history or potential risk of collision or runway incursion, and where heightened attention by pilots/drivers is necessary.

A "hot spot" is a runway safety related problem area on an airport that presents increased risk during surface operations. Typically it is a complex or confusing taxiway/taxiway or taxiway/runway intersection. The area of increased risk has either a history of or potential for runway incursions or surface incidents, due to a variety of causes, such as but not limited to: airport layout, traffic flow, airport marking, signage and lighting, situational awareness, and training. Hot spots are depicted on airport diagrams as open circles or polygons designated as "HS 1", "HS 2", etc. and tabulated in the list below with a brief description of each hot spot. Hot spots will remain charted on airport diagrams until such time the increased risk has been reduced or eliminated.

LAND AND HOLD SHORT OPERATIONS (LAHSO)

LAHSO is an acronym for "Land and Hold Short Operations." These operations include landing and holding short of an intersection runway, an intersecting taxiway, or other predetermined points on the runway other than a runway or taxiway. Measured distance represents the available landing distance on the landing runway, in feet.

Specific questions regarding these distances should be referred to the air traffic manager of the facility concerned. The Aeronautical Information Manual contains specific details on hold-short operations and markings.

LAND AND HOLD SHORT OPERATIONS (LAHSO)

LAHSO is an acronym for "Land and Hold Short Operations." These operations include landing and holding short of an intersection runway, an intersecting taxiway, or other predetermined points on the runway other than a runway or taxiway. Measured distance represents the available landing distance on the landing runway, in feet.

Specific questions regarding these distances should be referred to the air traffic manager of the facility concerned. The Aeronautical Information Manual contains specific details on hold-short operations and markings.

HOT SPOTS

An "airport surface hot spot" is a location on an aerodrome movement area with a history or potential risk of collision or runway incursion, and where heightened attention by pilots/drivers is necessary.

A "hot spot" is a runway safety related problem area on an airport that presents increased risk during surface operations. Typically it is a complex or confusing taxiway/taxiway or taxiway/runway intersection. The area of increased risk has either a history of or potential for runway incursions or surface incidents, due to a variety of causes, such as but not limited to: airport layout, traffic flow, airport marking, signage and lighting, situational awareness, and training. Hot spots are depicted on airport diagrams as open circles or polygons designated as "HS 1", "HS 2", etc. and tabulated in the list below with a brief description of each hot spot. Hot spots will remain charted on airport diagrams until such time the increased risk has been reduced or eliminated.

CITY/AIRPORT	HOT SPOT	DESCRIPTION*
HARRISBURG, PA		
CAPITAL CITY (CXY)	HS 1	Rwy 26 LAHSO.
	HS 2	Rwy 08 ILS hold line.
	HS 3	Twy C at Rwy 30 and Twy B.

NE-4, 21 OCT 2010 to 18 NOV 2010

ATTENTION ALL USERS OF ILS PRECISION RUNWAY MONITOR (PRM)

Condensed Briefing Point:
*When instructed, immediately switch to the tower frequency and select the monitor frequency audio.

1. **ATIS.** When the ATIS broadcast advises that simultaneous ILS/PRM and LDA/PRM approaches are in progress, pilots should brief to fly the ILS/PRM 26 approach. If later advised to expect an ILS 26 approach, the ILS/PRM 26 chart may be used after completing the following briefing items:
   (a) Minimums and missed approach procedures are unchanged.
   (b) Monitor frequency no longer required.

2. **Dual VHF Communication required.** To avoid blocked transmissions, each runway will have two frequencies, a primary and a monitor frequency. The tower controller will transmit on both frequencies. The monitor controller's transmissions, if needed, will override both frequencies. Pilots will ONLY transmit on the tower controller's frequency, but will listen to both frequencies. Select the monitor frequency audio only when instructed by ATC to contact the tower. The volume levels should be set about the same on both radios so that the pilots will be able to hear transmissions on at least one frequency if the other is blocked.

3. **ALL "Breakouts"** are to be hand flown to assure that the manuever is accomplished in the shortest amount of time. Pilots, when directed by ATC to break off an approach, must assume that an aircraft is blundering toward their course and a breakout must be initiated immediately.

   (a) ATC Directed "Breakouts": ATC directed breakouts will consist of a turn and a climb or descent. Pilots must always initiate the breakout in response to an air traffic controller instruction. Controllers will give a descending breakout only when there are no other reasonable options available, but in no case will the descent be below minimum vectoring altitude (MVA) which provides at least 1000 feet required obstruction clearance. The MVA in the final approach segment is 1800 feet at Philadelphia Intl Airport.

   (b) Phraseology - "TRAFFIC ALERT": If an aircraft enters the "NO TRANSGRESSION ZONE" (NTZ), the controller will breakout the threatened aircraft on the adjacent approach. The phraseology for the breakout will be:

   "TRAFFIC ALERT, (aircraft call sign) TURN (left/right) IMMEDIATELY, HEADING (degrees), CLIMB/DESCEND AND MAINTAIN (altitude)".

4. **ILS Navigation** Decending on ILS glideslope ensures complying with any charted crossing restrictions.

Special pilot training required. Pilots who are unable to participate, or dispatchers on their behalf, must contact the FAA Command Center prior to departure. (1-800-333-4286 or 703-904-4452) to obtain an arrival reservation. Non-participating pilots enroute to PHL as an alternate, or trained pilots that are unexpectedly unable to participate due to in-flight circumstances will be afforded appropriate arrival services as operational conditions permit. Non-participating pilots shall notify the New York or Washington ARTCC as soon as practical, but at least 100 miles from PHL.

LAND AND HOLD SHORT OPERATIONS (LAHSO)

LAHSO is an acronym for "Land and Hold Short Operations." These operations include landing and holding short of an intersection runway, an intersecting taxiway, or other predetermined points on the runway other than a runway or taxiway. Measured distance represents the available landing distance on the landing runway, in feet.

Specific questions regarding these distances should be referred to the air traffic manager of the facility concerned. The Aeronautical Information Manual contains specific details on hold-short operations and markings.

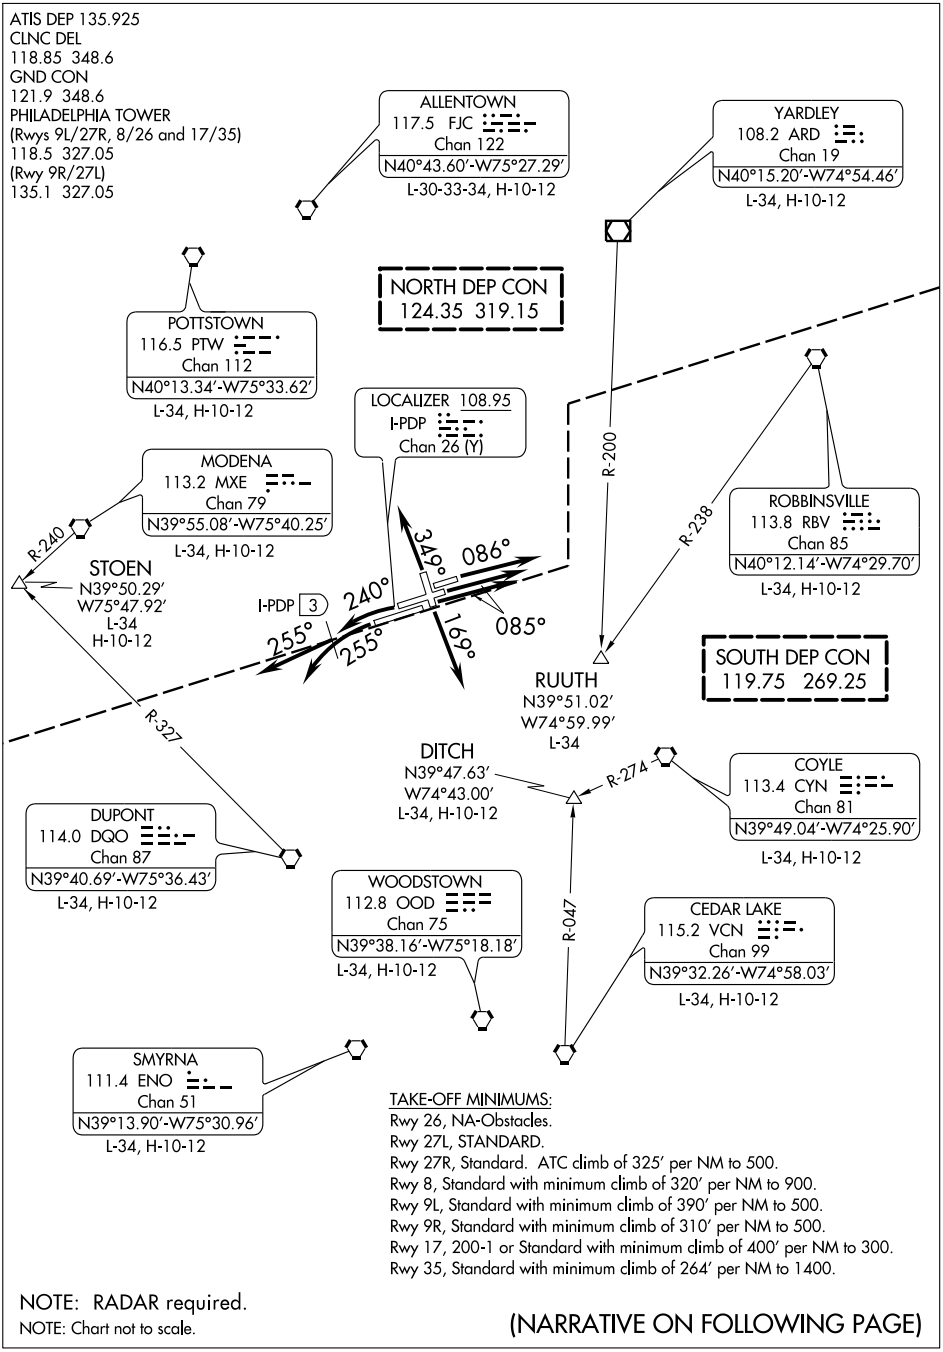
PHILADELPHIA EIGHT DEPARTURE



TAKE-OFF MINIMUMS:
Rwy 26, NA-Obstacles.
Rwy 27L, STANDARD.
Rwy 27R, Standard. ATC climb of 325' per NM to 500.
Rwy 8, Standard with minimum climb of 320' per NM to 900.
Rwy 9L, Standard with minimum climb of 390' per NM to 500.
Rwy 9R, Standard with minimum climb of 310' per NM to 500.
Rwy 17, 200-1 or Standard with minimum climb of 400' per NM to 300.
Rwy 35, Standard with minimum climb of 264' per NM to 1400.

NOTE: RADAR required.
NOTE: Chart not to scale.

(NARRATIVE ON FOLLOWING PAGE)

NE-4, 21 OCT 2010 to 18 NOV 2010
NE-4, 21 OCT 2010 to 18 NOV 2010

DEPARTURE ROUTE DESCRIPTION

TAKE-OFF RUNWAY 27L: Turn left heading 255°, or as assigned by ATC climb heading 245° or 268°, Thence . . . .
TAKE-OFF RUNWAY 27R: DME required. Turn left heading 240°, at I-PDP 3 DME turn right heading 255°, or after TAKE-OFF as assigned by ATC climb heading 245° or 268°, Thence . . . .
TAKE-OFF RUNWAYS 9L/9R: Fly heading 085°, or as assigned by ATC climb heading 081° or 096°, Thence . . . .
TAKE-OFF RUNWAY 8: Fly heading 086°, Thence . . . .
TAKE-OFF RUNWAY 17: Fly heading 169°, Thence . . . .
TAKE-OFF RUNWAY 35: Fly heading 349°, Thence . . . .

. . . . Expect radar vectors to filed/assigned route or depicted fix. Climb and maintain 5,000 feet or assigned lower altitude. Expect clearance to filed altitude/flight level ten minutes after departure.

SPECIAL INSTRUCTION: For appropriate departure control frequency, use frequency depicted within sector where first fix/navaid for your route is located.

TAKE-OFF OBSTACLES:

Rwy 8: Fence 163′ from DER, 250′ right of centerline, 4′ AGL/41′ MSL.
Rwy 9L: Tree 593′ from DER, 633′ left of centerline, 12′ AGL/26′ MSL.
Rwy 9R: Multiple towers beginning 2592′ from DER, 1044′ right of centerline, up to 140′ AGL/145′ MSL.
Rwy 17: Multiple trees beginning 1115′ from DER, 286′ left of centerline, up to 56′ AGL/65′ MSL. Rod on tower 1617′ from DER, 847′ right of centerline, 68′ AGL/77′ MSL. Ship in channel 3500′ from DER, 86′ left of centerline, 188′ AGL/188′ MSL.
Rwy 27L: Multiple trees beginning 256′ from DER, 282′ right of centerline, up to 40′ AGL/49′ MSL.
Rwy 35: Sign and multiple light poles and trees beginning 1232′ from DER, 205′ left of centerline, up to 114′ AGL/128′ MSL. Multiple signs and light poles beginning 1709′ from DER, 644′ right of centerline, up to 69′ AGL/83′ MSL.

LAND AND HOLD SHORT OPERATIONS (LAHSO)

LAHSO is an acronym for "Land and Hold Short Operations." These operations include landing and holding short of an intersection runway, an intersecting taxiway, or other predetermined points on the runway other than a runway or taxiway. Measured distance represents the available landing distance on the landing runway, in feet.

Specific questions regarding these distances should be referred to the air traffic manager of the facility concerned. The Aeronautical Information Manual contains specific details on hold-short operations and markings.
